Professional Summary

A proactive Computer Science undergraduate with a solid foundation in full-stack software development, REST API design, and cloud telemetry. Experienced in building scalable web applications using Python, SQL, Flask, and AWS SDK (Boto3). Adept at applying core Data Structures & Algorithms, database schema optimization, and software development best practices to build scalable, reliable, and user-centric systems.

Education

Sathyabama Institute of Science and Technology, 09/2022 – 08/2026
BE Computer Science and Engineering Current CGPA: 7.49 Chennai, TN

Cheran Matriculation Higher Secondary School, 07/2020 – 05/2022
Higher Secondary Examination (12th) Percentage: 75.8% Karur, TN

Projects

SEVA – Food Sharing Platform

Stack: Python, SQL, HTML/CSS, JavaScript

Developed a role-based web platform connecting food donors and NGOs to reduce food wastage.

Key Contributions

- Designed normalized database schema with indexed foreign keys for food request and approval workflows.
- Built REST APIs for secure session authentication, donor profile verification, and data handling.
- Implemented role-based access control (Admin / Donor / NGO) with granular permissions.
- Improved request handling efficiency by 30% using structured and indexed database queries.
- Engineered a responsive, mobile-first UI for real-time tracking of pickup requests and status updates.

AWS Cost & Performance Optimisation using Predictive Models

Stack: Python (Flask), Boto3, AWS CloudWatch, SQL, Flutter

Cloud analytics system predicting usage spikes and recommending infrastructure savings.

Key Contributions

- Harvested real-time EC2, CPU, and storage telemetry directly using AWS Boto3 SDK.
- Built cost forecasting logic using predictive regression algorithms to detect idle compute instances.
- Developed REST API backends serving cost analytics and rightsizing strategies to a Flutter UI.
- Implemented threshold alerts that identified potential cloud over-provisioning reductions of up to 20%.

TaskSync – High-Throughput Task & API Management Service

Stack: Python (FastAPI), PostgreSQL, Redis, Docker, Postman

Containerized asynchronous REST API managing team workflows, task queues, and permissions.

Key Contributions

- Built modular RESTful endpoints with JWT token authentication and automated Swagger documentation.
- Integrated Redis caching for repeated task queries, reducing database read latency by ~45%.
- Implemented automated unit and integration tests using PyTest achieving reliable request validation.
- Containerized backend services using Docker for seamless multi-environment deployments and testing.

Technical Skills/Certifications

Programming Python, SQL, JavaScript

Web Development: HTML5, CSS3, Flask, FastAPI

Databases: MySQL, PostgreSQL, SQLite

Tools & Platforms: Git, GitHub, Docker, Postman, AWS

- Postman — API Fundamentals Student Expert
- NPTEL — Database Management Systems
- NPTEL — Introduction to Machine Learning
